Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings are too dark, see Figures 2 and 3. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Henegar (US 6610159).

Henegar discloses the claimed invention including an arrangement for an apparatus (10) for application of roof covering (56) and comprising a wagon (12) moveable by aid of wheels (16) intended to join together two unrolled rolls of roof covering in connection to a joint on top of each other lying covering layers by aid of a hot air aggregate (34) supported by said wagon, which via a nozzle (52) blows hot gas in to said joint at the same time as the wagon is moved forwards and at least one operating pressure roller (132) included in said wagon, which

Art Unit: 3742

is intended to press together the covering layers lying on top of each other, characterized in that said hot air aggregate is turnable supported onto the one front outer portion of said wagon by aid of a hinge (44) having its nozzle turnable inwards between those covering layers, which shall be welded together and that the operating pressure roller is provided in the front, central portion of the wagon immediately after the nozzle on the same when it is in its turned in, active position and said pressure roller comprises a middle portion having a smaller diameter than adjacent outer portions for achieving two application surfaces against a joint surface in the joint at the same time as an extra pressure roller (134) is provided after or behind the operating pressure roller (132) intended only to act against that surface of the joint, which the first, operating pressure roller (132) has not treated.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
